

ROHIT RATHOD

DATA ANALYST

rrathod1101@gmail.com | GitHub | LinkedIn | Portfolio | +91 7710897843

PROFESSIONAL SUMMARY

Analytical and detail-oriented Data Science graduate (CGPA: 8.29) with hands-on internship experience in SQL database querying, Python ETL pipelines, and Power BI dashboards. Proven ability to clean complex datasets, perform exploratory data analysis (EDA), and automate workflows, reducing manual reporting cycles by 30%. Skilled in translating raw operational metrics into actionable business intelligence to support data-driven decision-making. Adept at collaborating in cross-functional team environments to identify performance trends and deliver data-driven optimization strategies. Quick learner passionate about leveraging statistical modeling, predictive analytics, and automated reporting systems to drive business efficiency.

TECHNICAL SKILLS

Languages:	Python, SQL, Bash
Data Analysis & BI:	Pandas, NumPy, Power BI (DAX, Power Query), Excel (Pivot Tables, VLOOKUP)
Databases:	MySQL, PostgreSQL
Machine Learning:	Scikit-learn, Regression, Classification, Clustering, NLP Preprocessing, TF-IDF
Tools & Dev:	Streamlit, Git, GitHub, VS Code, Docker (basic)
Cloud:	AWS, Azure

INTERNSHIP EXPERIENCE

Data Science Intern — Sentiment & NLP Pipeline Focus

- Designed and implemented a sentiment-analysis pipeline for 1,000+ customer feedback records using Python, TF-IDF vectorization, and classification models (SVM, Logistic Regression), achieving a classification accuracy of 85%.
- Conducted exploratory data analysis (EDA) and text preprocessing (lemmatization, tokenization, stop-word removal), reducing dataset noise and improving model feature extraction efficiency.
- Evaluated and optimized model performance using F1-score to mitigate class imbalance, reducing false positives in sentiment categorization.

Python Developer Intern — Automation & ETL Pipelines

- Automated daily data ingestion, cleaning, and reporting workflows using Python (Pandas/NumPy) and SQL, reducing manual data processing and spreadsheet consolidation time by 30%.
- Designed reusable data preprocessing pipelines to programmatically clean and standardize structured datasets, automating handling of missing values and outliers for 5+ production-level files.
- Collaborated on a computer vision object-detection project using YOLOv5 and OpenCV, containerizing the application via Docker to streamline local deployment environments.

FEATURED PROJECTS

HireSense-AI — Resume & ATS Analyzer

Google Gemini · Streamlit

- Engineered a web-based resume analyzer using the Google Gemini API to parse PDF resumes and evaluate semantic alignment against target job descriptions.
- Implemented natural language processing (NLP) to identify keyword gaps, formatting issues, and quantify impact statements, delivering actionable feedback.

Sales EDA + Power BI Dashboard

Python · Power BI · DAX

- Performed exploratory data analysis (EDA) using Python on 10,000+ transaction records to clean date formatting, handle missing fields, and isolate sales anomalies.
- Modeled structured database tables in Power BI using a Star Schema; built an interactive dashboard with custom DAX measures for YoY growth and sales correlations.

Customer Churn Prediction Pipeline

Python · Scikit-Learn

- Developed an end-to-end classification pipeline utilizing Gradient Boosting models to predict customer churn probability, achieving an accuracy of ~82% and an ROC-AUC of 0.87.
- Engineered custom preprocessors for categorical encoding and numeric scaling; analyzed feature importances to isolate contract type and tech support gaps as primary churn drivers.

SQL Data Analysis — Business Cases

MySQL · CTEs

- Solved 15 business case studies on retail transaction databases, writing optimized queries to extract insights from order patterns.
- Utilized Common Table Expressions (CTEs), window functions (DENSE_RANK, LEAD, LAG), and multi-table JOINS to calculate customer retention rates.

EDUCATION

B.Tech in IT (Data Science)

CGPA: 8.29 | Ajeenkya DY Patil University, Pune | 2021 – 2025

HSC (Science)

86.67% | Royal College of Science, Thane | 2021

CERTIFICATIONS

- SQL for Data Science** — UC Davis
- Databases & SQL with Python** — IBM
- Excel Skills for Business** — Macquarie University
- AWS Cloud Fundamentals** — Infosys

ACHIEVEMENTS

- Maintained 6+ public GitHub repositories with clean code.
- Developed & deployed 2 Streamlit web applications.
- Designed Power BI dashboard automating weekly reporting.
